afconvert help

Welcome to afconvert, the GUI for the powerful Terminal command *afconvert*.
In this help file, the basic functions of the application will be explained to you.

The interface

The interface of afconvert looks like this:

To convert, simply drop an audio file onto the drop zone and choose whether you want to convert it to *.m4a*, *.aiff* or any other supported format, and which bit rate you want to use, then hit „*Convert*".
